Illing joins up with Bowers for a Science and Math lesson using Legos...

On May 21st and May 26th, 7th grade students from Illing Middle School joined up with Mrs. Becker's 2nd grade students at Bowers Elementary School to partake in a Science and Math lesson using Legos.

Taking on the role of "engineer," the 2nd graders were grouped with 7th graders to build Lego cars. The engineers had to count studs, place axles appropriately, figure out the best size wheels for their vehicle, as well as thoroughly test and modify their car plans. Each car was tested to see how far it would roll off of an incline and students had to read a ruler to count the number of feet and inches their car traveled. Collaboration, creativity, and teamwork were at the heart of this learning activity. All the students are hoping to work together again via Google Hangout before the last day of school!
